

THE ASSURECARD

RESPONSIBLE PAPER KEY CARDS

FOR THE HEALTH OF YOUR GUESTS, EMPLOYEES AND THE PLANET

Key cards are one of the first things your guest touches. Unfortunately, plastic key cards take more than 1,000 years to biodegrade and they increase carbon emissions during manufacturing. Our plant-based RFID key cards look and feel like durable plastic cards and can work with your existing lock system for a cost-effective, single-user solution.

SAFER

AssureCards may be dispensed by the hotel guest for a contact-free experience that maintains physical distancing guidelines. In addition, they may include an anti-microbial coating to inhibit the growth of microorganisms on the surface of the key cards.

EARTH-FRIENDLY

These cards are sustainably made from renewably sourced paper pulp.

VERSATILE

While they are strong enough for multiple uses, the AssureCard may be discarded after one user (i.e., multiple nights). AssureCards also offer more design options than plastic cards (e.g., printed with graphics, foils, and glitter) to capture and highlight your unique brand identity.

ECONOMICAL

Our paper key cards can be printed at a cost that is similar to, or in some cases, lower than the cost of producing plastic cards.

"This is extremely valuable in preventing germ transfer and showing our guests that we are doing all we can to keep them safe. Plus, hotels that use AssureCards can do so with the environment in mind by helping to reduce the plastic that goes into landfills."

CHRIS BEBO, PROVENANCE HOTELS
